

# Quality, Safety and Environmental Policy

enLighten Australia is a professional and privately owned Australian LED innovations company who design, manufacture, supply and install highly efficient, intelligent lightning.

We have implemented an Integrated Management System that is compliant to:

- ISO 9001:2016 Quality Management Systems.
- ISO 14001:2016 Environmental Management Systems.
- ISO 45001:2018 Occupational Health & Safety Management

Systems. enLighten is committed to:

- Meeting our Customer expectations and requirements through our products and services, with long term reliability and on time delivery.
- Providing the resources, infrastructure, consultation, and training required to ensure that our workers have the expertise and industry experience needed.
- Complying with legislative and other requirements, including the requirements of the Standards we are certified to.
- Encouraging all staff to contribute towards the continuous improvement of our services and processes to enhance our quality, safety and environmental performance.
- Proactively eliminating work-related injury and illness.
- Acting in a socially responsible manner by identifying and managing environmental risks to protect the environment and prevent pollution.
- Evaluating the effectiveness of our management system to continuously mitigate business, safety and environmental risks.

The Directors are accountable for the effectiveness of the management system, the provision of the resources required, and for ensuring that it supports the strategic direction of enLighten Australia. At the same time, all our team members recognise that they have a duty of care to themselves, others, and the environment including the reporting of hazards, incidents and near misses.

This policy provides a framework for setting objectives, and it is reviewed annually by the Directors and Managing Director to ensure it remains relevant and appropriate. It is communicated to all staff and made available to other interested parties.

We will ensure quality, safety and environmental performance criteria are considered during design, planning and product and services delivery.

Steve Cahill
